                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence encodes a murine protein that induces interferon (IFN)-gamma production by immunocompetent cells. IFN-gamma is a protein which has antiviral, antioncotic and immunoregulatory activities, and is produced by immunocompetent cells stimulated with antigens or mitogens. A probe derived from the present sequence was used to isolate the corresponding human protein from human liver cells. The protein of the invention is used to treat IFN-gamma susceptible diseases, and also have use as a antiviral agent, antibacterial agent, antitumour agent, immunoregulatory agent and blood platelet enhancing agent. Diseases which can be treated with the protein include viral diseases such as which can be treated with the protein include viral diseases such as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Mouse; interferon gamma production; IFN-gamma; immunocomp antiviral; immunoregulatory; antigen; mitogen; IFN-gamma susceptible disease; antibacterial; antitumour; blood platelet enhancing agent; hepatitis; herpes syndrom AIDS; bacterial disease; Candidiasis; malaria; solid mali

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          γÇ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          and human interferon-gamma inducing factors in which one or more cysteine residues are replaced with different residues at or away from the consensus sequences shown in WA8956-WA8958. The mutant mIGIFs are capable of stimulating immunocompetent cells for the production of interferon-gamma and are claimed to be less toxic, more active and content than the corresponding wild type interferon-gamma inducing stable than the corresponding wild type interferon-gamma inducing cytotoxicity and/or induce killer cell formation, and may therefore cytotoxicity and/or induce killer cell formation, and may therefore agents and antimicrobial agents. The mutant mIGIFs are also claimed to be useful as antitumour agents, antitumour immunotherapeutics, antiviral capents and antimicrobial agents. The mutant mIGIFs are also claimed to be useful for treating hepatitis, acquired immunodeficiency syndrome (AIDS), malaria, tuberculosis, solid malignant tumours (e.g. renal carcinoma), rheumatism, osteoporosis and thrombopenia caused by a radiation- and chemo-therapy.

                                                                                                                                                                                                                                     The present sequence represents the mutant mouse interferon-gamma inducing factor CDNA mIGIF/MUT11. The wild-type mouse interferon-gamma factor (mIGIF) cDNA sequence is shown in V32755. The invention provides for mutant human and mouse interferon-gamma inducing factors in which one or more cysteine residues are replaced with different residues at or away from the consensus sequences shown in W48956-W48958. The mutant mIGIFs are capable of stimulating immunocompetent cells for the production of interferon-gamma and are claimed to be less toxic, more active and
                                       antitumour immunotherapeutics, antiviral agents and antimicrobial agents. The mutant mIGIFs are also claimed to be useful for treating hepatitis, acquired immunodeficiency syndrome (AIDS), malaria, tuberculosis, solid malignant tumours (e.g. renal carcinoma), rheumatism, osteoporosis and thrombopenia caused by radiation— and chemo-therapy.
                                                                                                                                                                stable than the corresponding wild type mIGIF factor. The mutant mIGIFs are also claimed to enhance killer cell cytotoxicity and/or induce killer cell formation, and may therefore be useful as antitumour agents,
                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 10; pages 49-50;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Nucleotide sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Rattus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    IL-18-alpha;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This is the nucleotide sequence of the rat interferon-gamma inducing factor (IGIF), also known as interleukin-18 (II-18). It can be used to transform a cell, which upon its expression can cause the cell to produce rat IGIF, i.e. II-18 or II-18 alpha. The antibody to IGIF, IGIF and probes derived from it, are useful for detection of II-18 or II-18 alpha present in a sample. The amount of II-18 or II-18 alpha in a sample can be used to quantitate stress in a mammal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          W09810072-A1

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             28-JUL-1998
                                                                                                                                                                      expression can cause the cell to produce rat IGIF, i.e. IL-18 or IL-18 alpha. It is made by the deletion of 57 bases (360-417) from V20875, a probable exon. The antibody to IGIF, IGIF and probes derived from it, are useful for detection of IL-18 or IL-18 alpha present in a sample. The amount of IL-18 or IL-18 alpha in a sample can be used to quantitate stress in a mammal.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Conti B,

This sequence represents cDNA encoding equine interleukin-18 (IL-18). The cDNA was produced from alveolar macrophage mRNA via reverse transcription using primer Z55625, and the cDNA amplified via PCR using primers Z55626-Z55629. The invention relates to the use of recombinant IL-18 as a vaccine adjuvant. Adjuvants are used in vaccines to potentiate the immune response to an antigen derived from the pathogen. It is important that the correct type of immune reaction is triggered.

When subsequently challenged with virulent PRV, unvaccinated control mice all succumbed to the infection, and only 30% of mice vaccinated with vaccine antigen alone (inactivated PRV plus TT) survive the infection. In contrast, mice which received the same amount of vaccine antigen in conjunction with IL-18 had an 80% survival rate after infection. IL-18 may be used as an adjuvant in vaccines for the immunisation of humans and other animals, such as pigs, sheep, birds, cattle, dogs, horses and fish. An adjuvant composition comprising IL-18 may be administered concomitantly or sequentially with a vaccine formulation. Additionally, IL-18 nucleotides operably linked to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence

The method uses a high-amplification culture medium to increase the expression level and only requires a one-step purification process to obtain a medical injection-pure product.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This sequence represents the human interleukin-18 (IL-18) nucleotide sequence. The invention relates to a method for engineering bacterium for recombination of human IL-18 and a method for the preparation of IL-18.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Preparation method for engineering bacteria for recombination of human interleukin-18 and its product thereof \cdot
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 WPI; 2000-340020/30.

The mutant IGIFs are also claimed to enhance killer cell cytotoxicity and/or induce killer cell formation, and may therefore be useful as antitumour agents, antitumour immunotherapeutics, antiviral agents and antimicrobial agents. The mutant IGIFs are also claimed to be useful for treating hepatitis, acquired immunodeficiency syndrome (ATDS), malaria, tuberculosis, solid malignant tumours (e.g. renal carcinoma), rheumatism, ostepporosis and thrombopenia caused by

                                                                                                                                                                                                                                                                                                                          The sequence contained an oligo-dT track that was present in the oligonuclectide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the NotI site and the oligo-dT track served to identify it as a clone from the normalized basal ganglia library cDNA Library preparation: M.B. Soares Lab Clone distribution: NIH BMAP cDNA clones will be made available by the means that is soon to be determined. When NIH determines the means for distribution of the BMAP cDNA clones, the record will be updated accordingly when that means is determined. The following repetitive elements were found in this cDNA sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AW125102 512 bp mRNA EST 22-OCT-UI-M-BH2.1-apx-g-10-0-UI.s1 NIH_BMAP_M_S3.1 Mus musculus UI-M-BH2.1-apx-g-10-0-UI 3', mRNA sequence.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              brain (cerebellum, brain stems, olfactory bulbs, hypothalamus, correx, amygdala, basal ganglia, pineal gland, striatum, hipoccampus) after a series of subtractions to reduce the representation of cDNAs from which ESTs had already been generated. The following serially subtracted libraries were generated in this process: NIH_BMAP_M_S1. NIH_BMAP_M_S2, NIH_BMAP_M_S1. The subtracted library (NIH_BMAP_M_S3.1) was constructed as follows: PCRamplified cDNA inserts from NIH_BMAP_M_S2 clones from which 3' ESTs had been derived was used as a driver in a hybridization with the NIH_BMAP_M_S2 library in the form of single-stranded circles. The remaining single-stranded circles. The remaining single-stranded circles (subtracted library) was purified by hydroxyapatite column chromatography, converted to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Conservative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 previously described (Bonaldo, Lennon and Soares, Genome Research 6:791-806, 1996)

by long-range high fidelity pCR using Takara's Ex Taq
polymerase. Then, the cDNAs were purified by
phenol/chloroform and by Centricon 100. The cDNAs were
phenol/chloroform and by Centricon Then, the cDNAs were
digested with SalI and NotI enzymes. Then, the cDNAs were
digested by Giboc's Size Fractionation Column. The
size selected by Giboc's Size Fractionation Column. The
SalI/NotI site of pSPORTI plasmid
cDNAs were cloned into SalI/NotI site of pSPORTI plasmid
cDNAs were cloned into SalI/NotI site of pSPORTI plasmid
vector. The DH10B E. coli host was transformed with the
vector. The DH10B E. coli host was transformed with the
ligation mixture by Chemical method. The library was
ligation mixture by Chemical method with piao."

The sequence tag present in the CDNA between the NotI site and the oligo-dT track served to identify it as a clone from the normalized brain stems library cDNA Library Preparation: M.B. Soares Lab Clone distribution: NIH BMAP cDNA clones will be made available by the means that is soon to be determined. When NIH determines the means for distribution of the BMAP cDNA clones, this record will be updated accordingly when that means is determined.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          POLYA=Yes

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The sequence contained an oligo-dT track that was present in the oligonucleotide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide polly A strand cDNA and therefore this may represent a bonafide polly A strand cDNA and therefore this may represent a clone from the tail. The sequence tag present in the cDNA between the NotI site and the oligo-dI track served to verify it as a clone from the non-normalized brain stems library cDNA Library preparation: M.B. soares Lab Clone distribution: NIH BMAP cDNA clones will be made soares Lab Clone distribution of the BMAP cDNA clones, this available by the means that is soon to be determined. When NIH several the means for distribution of the BMAP cDNA clones, this determines the means for distribution of the BMAP cDNA clones. The following repetitive elements were found in this cDNA sequence: The following repetitive elements were found in this cDNA sequence:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Contact: Chin, H
